.NET DEVELOPER

WHY US?

When you get the chance to work for a rapidly growing, technologically innovative company that is inspired from within, you don't think twice. CYCLE d.o.o. is decidedly different…and we like it that way. A leading supply chain and retail software solutions company in the region definitely and going globally. No day is ever routine; there are constantly new challenges and new opportunities for your voice to be heard. And yes, we do listen to you. We call it "autonomy with accountability," a chance to truly make a difference, no matter what your title. You'll call it the best career move you ever made.

Job Description Summary:

The Graduate Software Engineer develops software functionality that meets customer needs and design specification for bespoke turn-key solutions within a project plan and budget. Attention to quality of coding and testing is critical and, commensurate with experience, is expected to complete design work under supervision of the project manager.

You can also expect to:

• Be involved in the complete software development lifecycle

• Participate in technical design, development and testing of application modules

• Build interfaces to host systems (e.g, ERP, Automated equipment)

Qualified candidates must have:

• Bachelors Degree in Computer Science or related subject or equivalent experience in technology-related field

• At least two years of experience in similar position

• C#/WCF knowledge to develop high quality code that is fit for purpose and conforms to coding standards for performance and security

• Experience and competency in .NET Framework up to 4.5, VS 2010/2012

• Strong database development skills and experience including logical design and SQL programming.
