Brezna d.o.o. Belgrade as an Avnet EM EMEA partner is looking for a

SAP Architect / Senior Developer

Job location: Belgrade

I Job Description

The SAP architect has the technical leadership of the Brezna SAP development team. He provides leadership to the local development team and makes sure that all solutions comply with the Avnet quality and development standards. On a project basis he will work in close contact with an Avnet senior SAP specialist to ensure a solution that is in line with the Avnet SAP solution landscape.

He has to convert the functional specification into a technical specification and split it up into work packages for the single developers. This includes the architecture of the solution, the integration into standard SAP and Avnet tools, the user interface, the interfaces to other systems and the authorization concept.

The performance impact and the impact on the upgradeability of the core ERP system has to be discussed and agreed with the Avnet SAP architects**.**

II Tasks and Responsibilities

- Design SAP based IT Application solutions based on Functional Requirements. Document in a Technical Specification
- Ensure that the delivered solution is in line with the Avnet development standards and quality requirements
- Mentor and train the ABAP Junior Developers
- Review and suggest improvements of solutions developed by the ABAP Junior Developers
- Conduct Impact/Risk Assessment on Operations when implementing new solutions or enhancing existing ones, define mitigating strategies.
- Provide qualified effort estimations for defined packages while considering the skills and experience of the individual development resources.

III   Know How and Other Skills

Technical Skills

- Strong technical knowledge, encompassing SAP customizing for SD & MM Modules with hands-on experience in a complex SAP R/3 system
- Excellent SAP ABAP and Application Analysis/Development skills
- Strong analytical, problem-solving and conceptual skills
- Understanding of the RDBMS Oracle
- Good overall IT Technical skills sets including Entity-Relationship-Modeling and Object Oriented Modeling/Developments skills
- Understanding of all components in an enterprise infrastructure environment (Network, Unix, Windows Server (AD), Storage …)

Soft Skills

- Very Good management skills to support and motivate the team of developers
- Very Good team player and ability to work in an international environment
- Excellent oral, written and presentation skills

V   Prerequisite to the Position
